

Swiggy Sales Analysis Dashboard Report

1. Project Title

Swiggy Sales Analysis Dashboard using Excel

2. Objective

The objective of this project is to analyze Swiggy sales performance, customer ratings, order trends, and regional sales distribution using an interactive Excel dashboard. The dashboard helps identify business growth patterns, customer behavior, and top-performing categories, cities, and states.

3. Tools & Technologies Used

- Microsoft Excel
- Pivot Tables
- Pivot Charts
- Slicers
- Conditional Formatting
- Data Cleaning
- Dashboard Design

4. Dataset Information

The dataset contains food delivery sales data including Order Details, Sales Amount, Customer Ratings, Food Categories, State-wise Sales, City-wise Sales, and Weekly & Monthly Orders.

5. Key Performance Indicators (KPIs)

- Total Sales: ₹53.01M
- Average Rating: 4.34
- Rating Count: 5.59M
- Total Orders: 197.43K
- Average Order Value: ₹268.51

6. Dashboard Analysis

- Monthly Sales Trends: Sales remained stable with slight fluctuations across months.
- Sales by Food Type: Non-Veg contributes 67% of total sales.
- State-wise Analysis: Maharashtra, Karnataka, Gujarat, and Uttar Pradesh are top-performing states.
- Weekly Sales: Saturday generated the highest sales while Tuesday showed the lowest.
- Top Cities: Bengaluru recorded the highest sales among all cities.

7. Key Findings

- Total sales exceeded ₹53M.
- Customer satisfaction remained high with an average rating of 4.34.
- Non-veg category dominated overall sales.
- Weekend demand is significantly higher than weekdays.
- Bengaluru and Maharashtra emerged as major revenue contributors.

8. Challenges Faced

- Cleaning inconsistent data entries.
- Managing large datasets in Excel.
- Designing an interactive dashboard.
- Creating dynamic charts and slicers.

9. What I Learned

- Data cleaning and preprocessing.
- Building interactive dashboards in Excel.
- Using Pivot Tables and Pivot Charts effectively.
- Data visualization and storytelling.
- Extracting business insights from raw datasets.

10. Conclusion

This project successfully analyzes Swiggy sales data using an interactive Excel dashboard. The dashboard provides clear insights into sales performance, customer ratings, food category trends, and regional performance. From the analysis, it was observed that Non-Veg food contributes the highest sales, weekends generate more orders, and Bengaluru is the top-performing city. Overall, the project demonstrates strong skills in data cleaning, visualization, dashboard designing, and business analysis using Excel.

11. Future Improvements

- Add real-time data integration.
- Include profit and delivery analysis.
- Build the dashboard in Power BI for advanced analytics.
- Add forecasting models for future sales prediction.
